

Numberly helps its clients collect, analyze and leverage data across different marketing channels.

- 150 tech engineers, a third of Numberly
- 8 offices worldwide
- clients in 50+ countries
- thousands of requests per second
- petabytes large clusters
- bare-metal infrastructure

Software Engineer / DevOps

- thorough knowledge in a **front-end** or **back-end** stack
- join multiple product teams
- use exciting **technologies** (Python, Vue.js, Kafka, Kubernetes, ScyllaDB, GraphQL)
- **build** great **platforms** that leverage data
- work with **Infrastructure Engineers** and Data Engineers

<https://nubr.ly/SE>

Python Machine Learning **JavaScript**
Hadoop Airflow **Kubernetes** Real Time
NoSQL High Availability **Spark** Ansible **Kafka**
Open Source Performance **Rust**

Data scientist Research / Analytics

Research

- develop **machine learning** algorithms to solve marketing issues (such as: recommendation algorithms, reinforcement learning for optimizing display banners, graph algorithms for building identifiers, scoring users, ...)
- read and benchmark research papers for selecting an **algorithm** work with data engineers and machine learning engineer to deploy your algorithm in production

Analytics

- query data and **run analysis** to optimize campaigns performance and give insights to the clients
- improve our **python** libraries with new standardized studies
- help automating reports / actions using your coding skills & develop ad **hoc models** for specific needs

numberly

Numberly helps its clients collect, analyze and leverage data across different marketing channels.

JOIN US!

Data Engineer / Data Ops

- join teams dedicated to **Big Data** and **Event-Driven** data pipelines
- design, create operate and maintain **large data storage architectures** using Hadoop, Airflow, ScyllaDB, Kafka
- interact with other teams to proactively **solve scaling problems** (Data Scientists & Software Engineers...)
